1. Why should I buy TuneCable BeatOne?

TuneCable BeatOne is a shareware. The trial version only allows you to convert the first 1 minute of each audio for sample testing. After purchasing the program, you will be provided with a license with your user ID and key code to unlock this limitation.

2. What benefits do I have after registration?

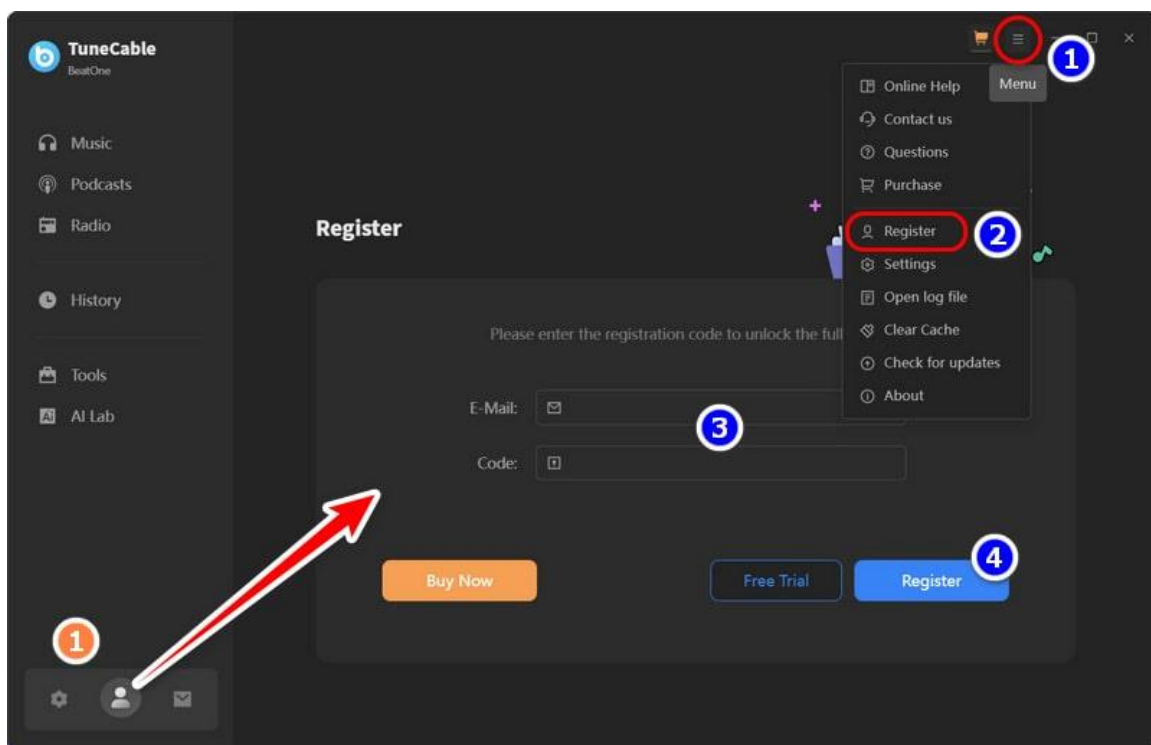

- You can use the full functions and features of TuneCable.

- You can enjoy lifetime FREE updates of the latest versions of TuneCable.
- You can enjoy FREE technical support.

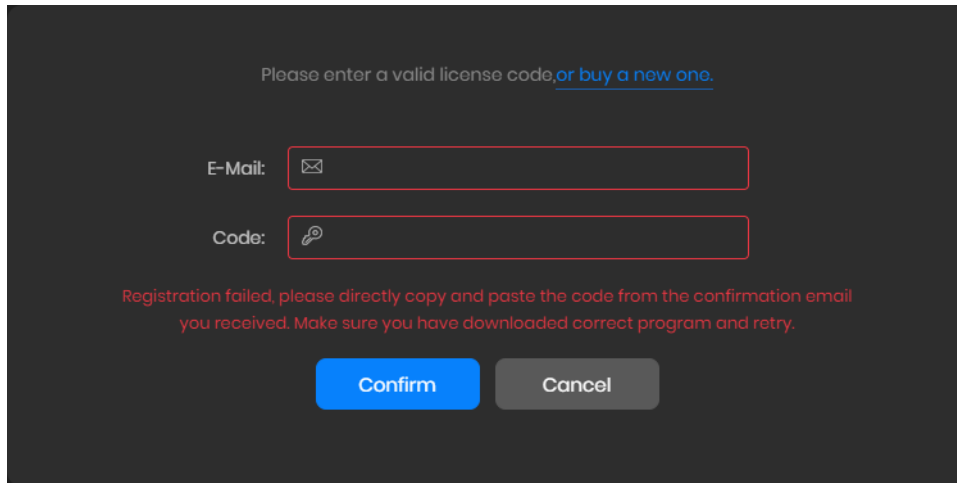

Register TuneCable BeatOne

Step 1. Start by picking your music on the main screen. See the "**Menu**" button at the top right. Click it to see more choices, then pick "**Register**". Or, you can also go to the bottom left of the side bar and click on the avatar icon there.

Step 2. After placing an order, you will receive an email with a special key. Write the email address and the code from that email into the registration boxes, and press the "**Register**" button to make your license work.

Note: The registration info is case-sensitive. And, please do not add a blank at the beginning or the end of the word. Make sure both the Email address and key code are the same as what we provided in the confirmation email after purchasing the program. If not, an error message will pop up as below:

Please enter a valid license code, [or buy a new one.](#)

E-Mail:

Code:

Registration failed, please directly copy and paste the code from the confirmation email you received. Make sure you have downloaded correct program and retry.

TuneCable BeatOne gets music in three different ways from lots of places. Here's how it works:

- 1. Download songs from Apps:** You can use it with Spotify, iTunes or Apple Music, Amazon Music, and Tidal.
- 2. Download songs from Web players:** It works with Spotify, Apple Music, Amazon Music, Tidal, YouTube Music, Line Music, Pandora, etc.
- 3. Download songs from Websites:** For places like Audible, Dailymotion, YouTube, Vimeo, SoundCloud, or any other site, just type in the website's address.

Now, let's walk through each way to get your music.

Download Music from the Music App / Web Player

Step 1: Select Music Source

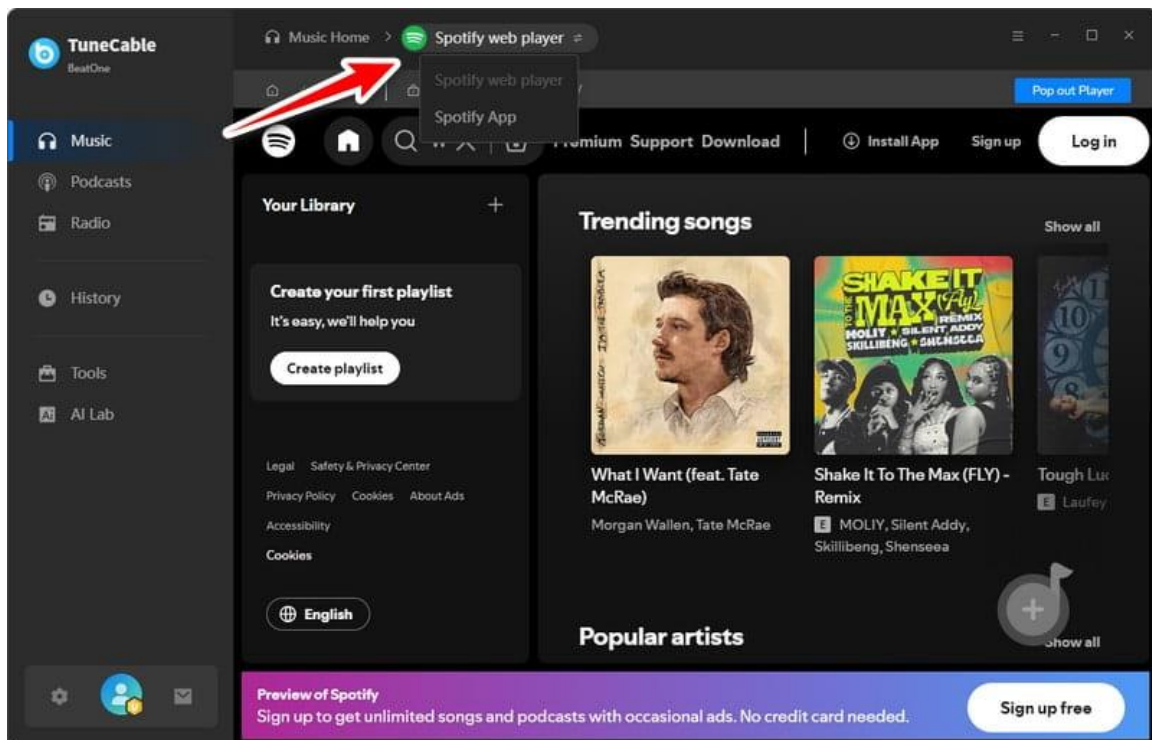

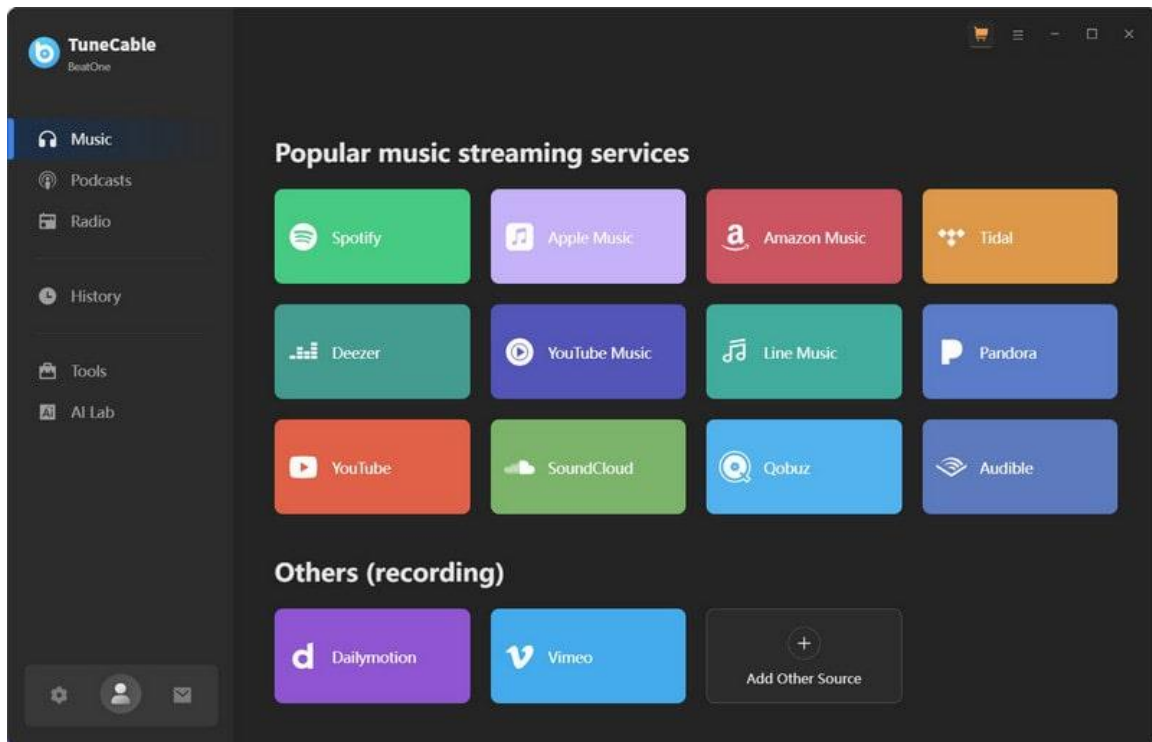

After the installation of TuneCable BeatOne, launch it on your computer. On the primary interface, top music streaming music platforms are displayed.

If you are inclined to high-quality music extraction, you can download music from the app. When recording music from Spotify, Apple Music/iTunes, Amazon Music, and Tidal Music, you are allowed to extract songs from the app. If you download music from the web player, the download speed will be faster.

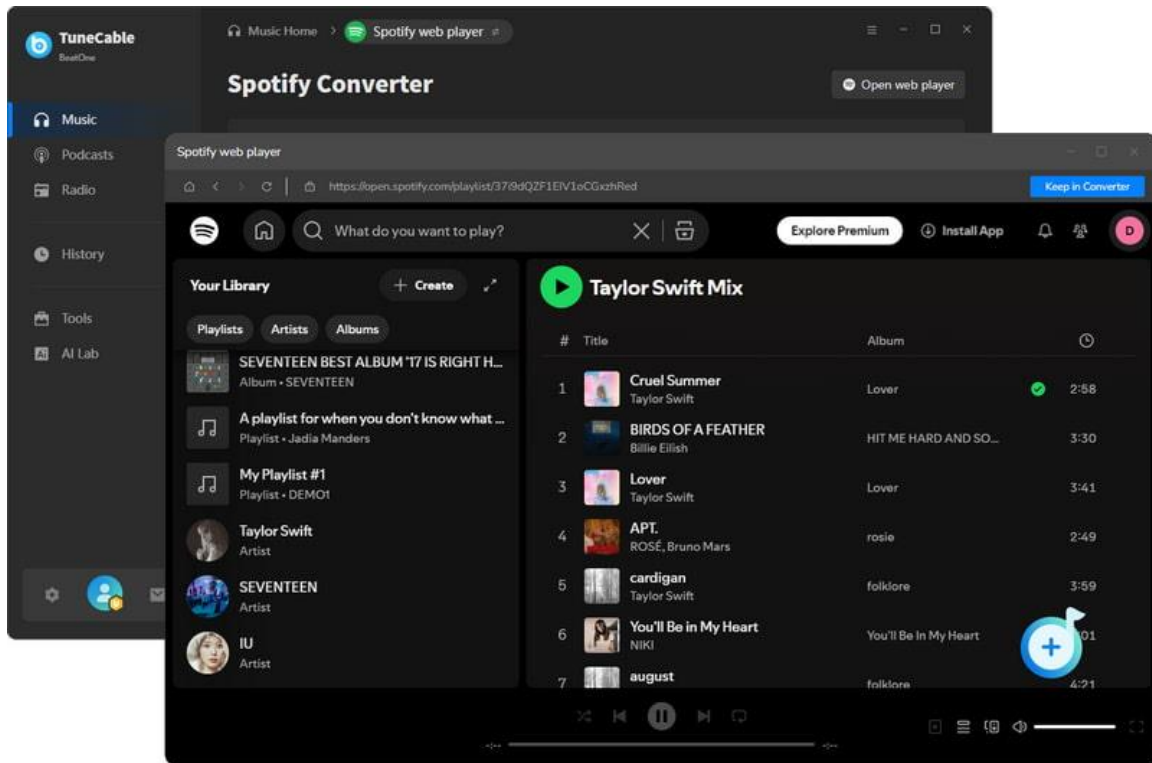

We take Spotify Music as an example.

Click on the "**Spotify**" tag on the primary interface. Click the "**Spotify App**" button or "**Spotify web player**" located in the top navigation bar to change download source.

After that, the pre-installed Spotify Music app or web player will open. Log into Spotify Music. (Tip: A free account is feasible to download music via TuneCable if the streaming music platform offers a free plan for the audience.)

Extra Tips: When you choose to download music from the web player, you have the option to decide how the web player is located by clicking "**Keep in Converter**" or "**Pop out Player**".

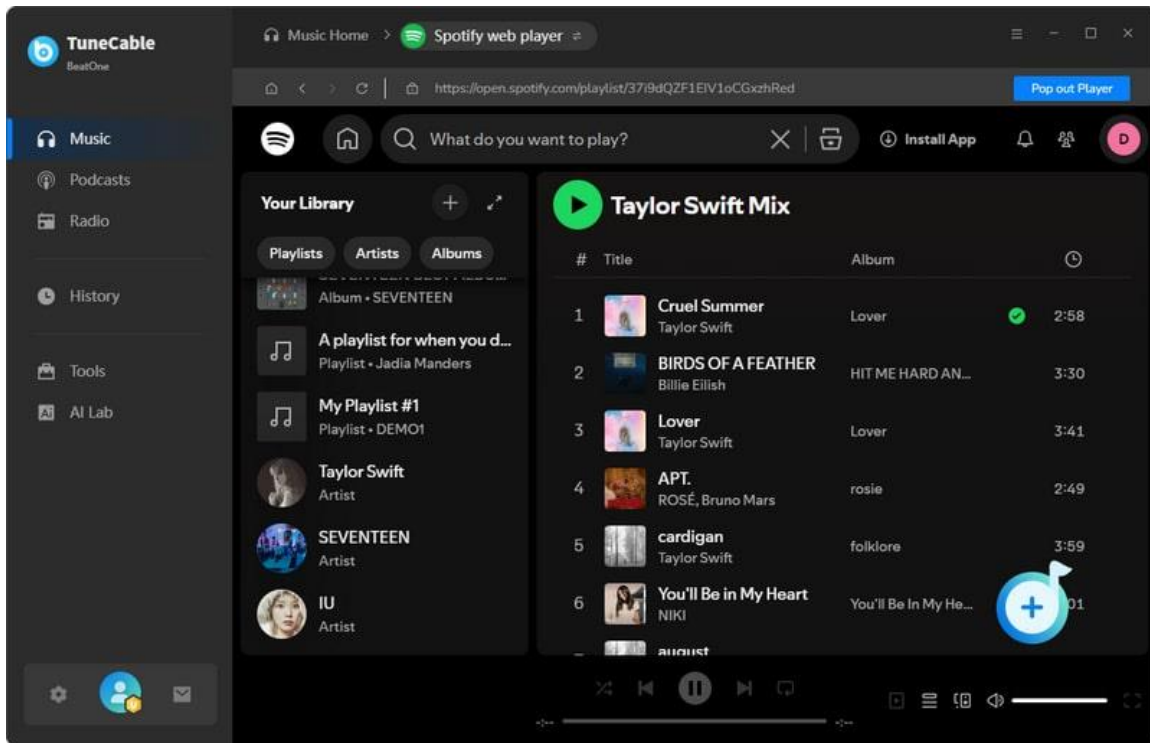

Step 2: Add Music to Queue for Download

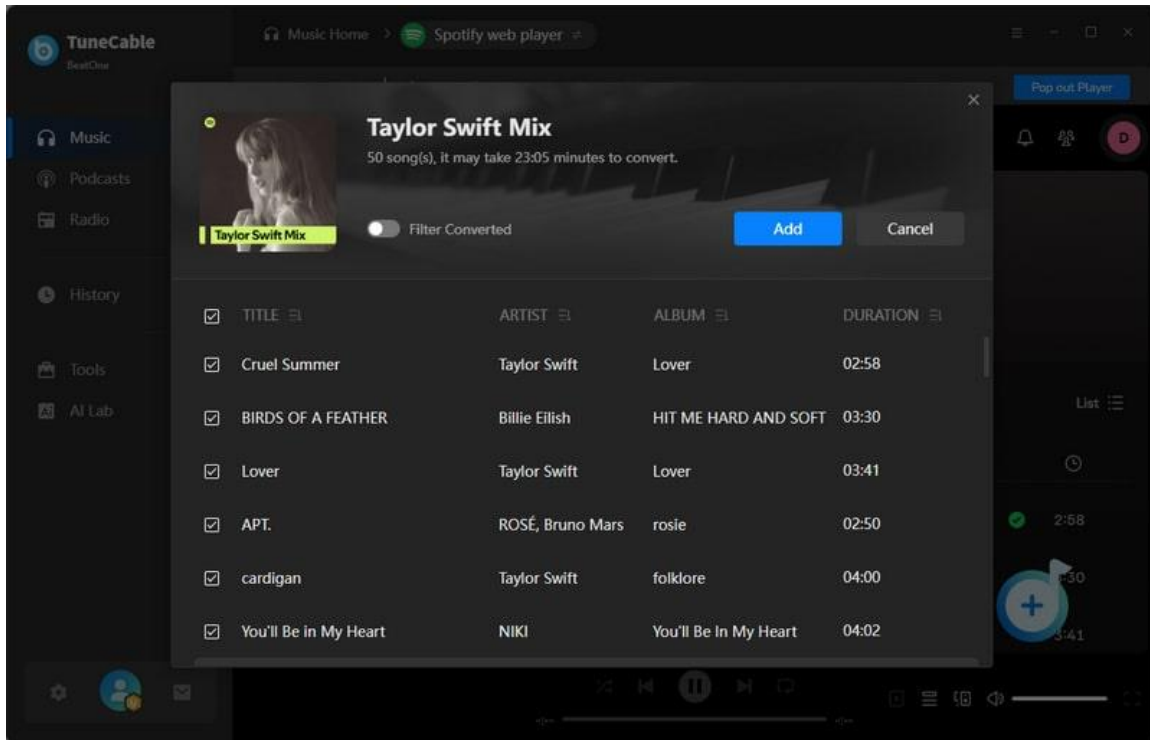

Browse for a desired song, album, or playlist and click on its title. Three methods are feasible to add songs:

- Drag or drop a song, album, or playlist from the Spotify app to TuneCable and start parsing. (Only feasible when downloading music from the app.)
- Right-click the "**three dots**" icon next to a track, album, or playlist and choose to copy its URL in the pop-up menu. Then you can paste the URL into the TuneCable parse box. (Only feasible when downloading music from the app.)

- Open a track, album, or playlist, and then tap on the **"Click to add"** button in the lower right.

TuneCable will list all tracks after parsing the link. Tick off your desired items and click on **"Add"**.

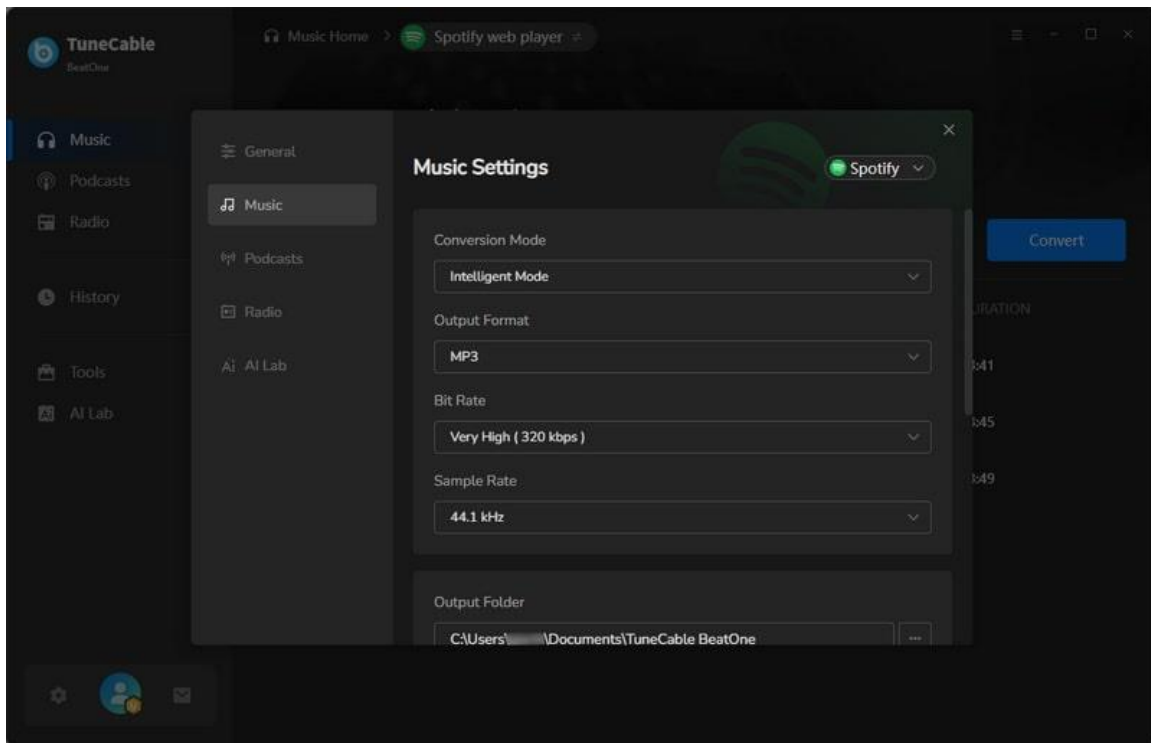

Step 3: Customize Output Settings

In the left sidebar, click on the "**Settings**" icon located in the lower left corner. Select the options you prefer and the changes will be applied automatically.

- **Conversion Mode:** Intelligent Mode, Record Mode, YouTube Mode
- **Output Format:** Auto, MP3, AAC, FLAC, WAV, AIFF, ALAC
- **Bit Rate:** 128kbps, 192kbps, 256kbps, 320kbps (available for MP3, AAC)
- **Bit Depth:** 16 bit, 24 bit (available for WAV, AIFF, ALAC, FLAC)
- **Sample Rate:** 44.1kHz, 48kHz, 96kHz, 192kHz
- **Output Folder:** To your preference
- **Output File Name:** Track Number, Title, Artist, Album, Playlist Index, Year

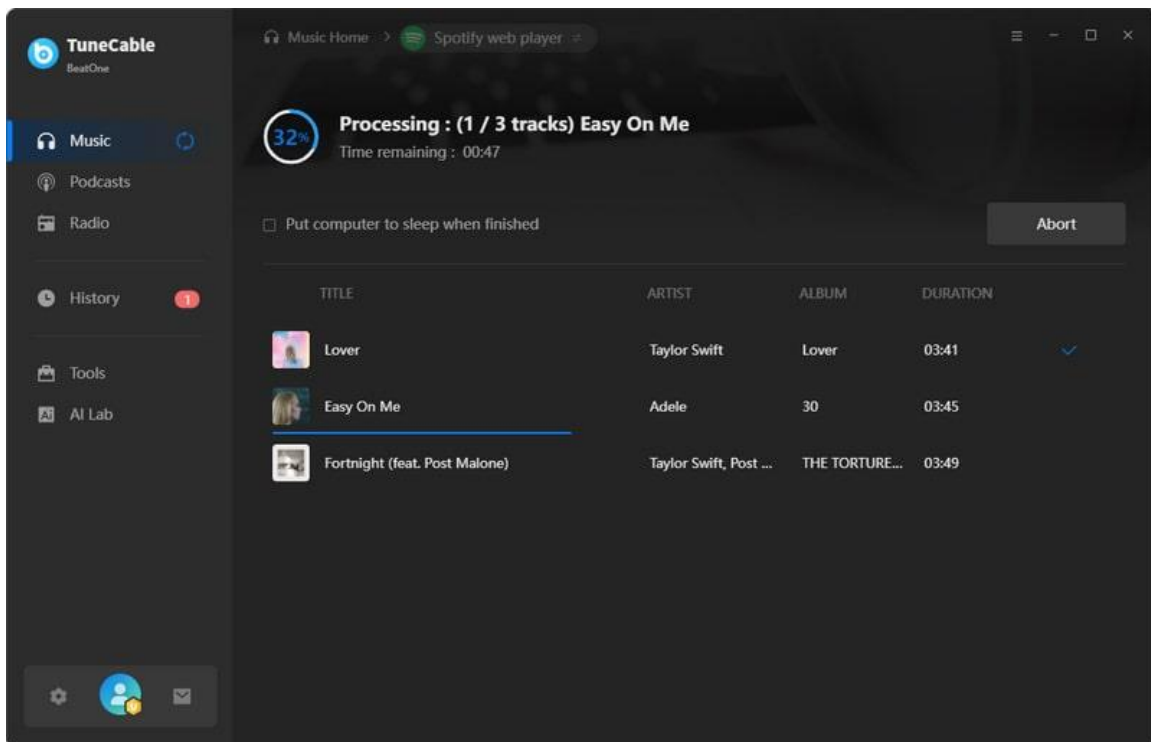

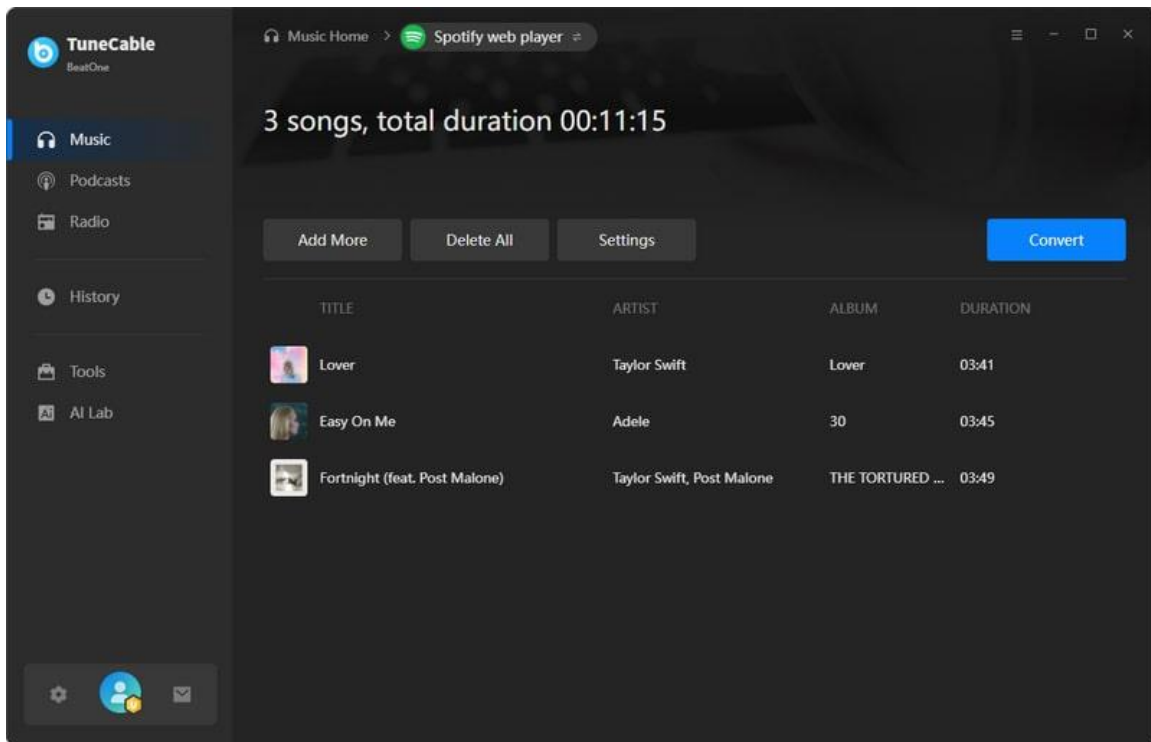

- **Output Organized:** None, Playlist, Artist, Album, Artist/Album, Album/Artist, Playlist/Artist, Playlist/Album
- **After Converting:** Do nothing, Open the output folder, Put the system to sleep

Here you can also change settings for Podcasts, Radio, and AI Lab.

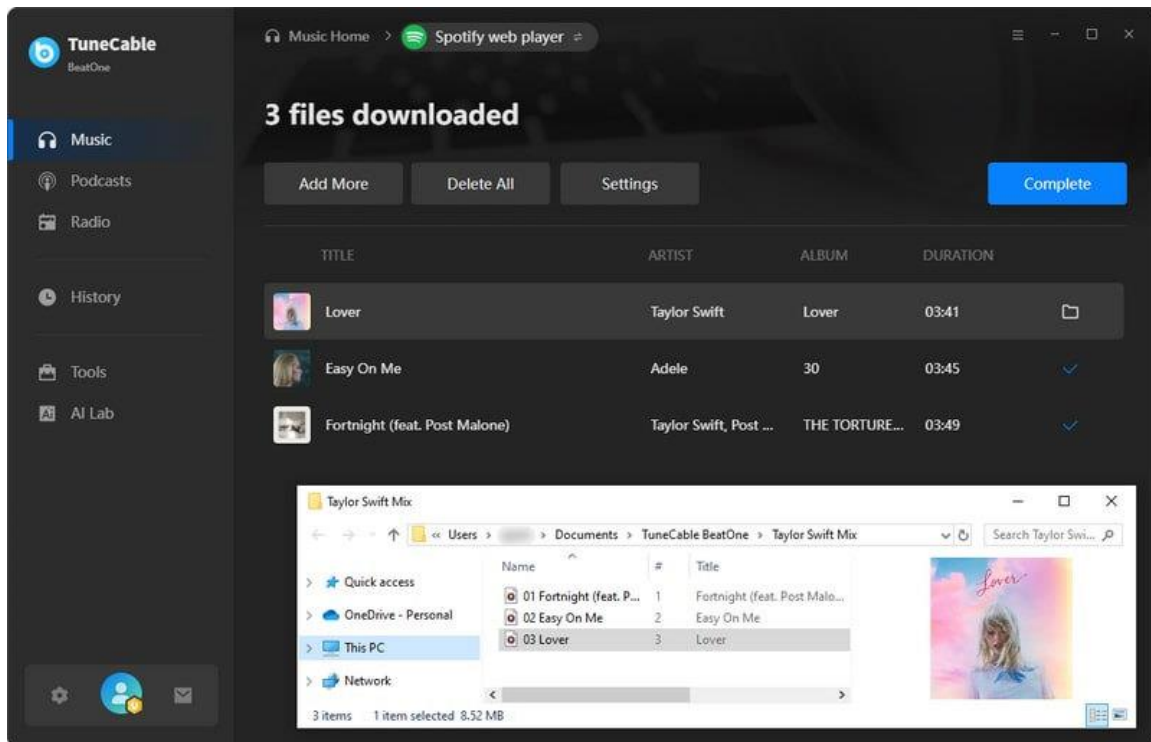

Step 4: Download Music as Local Files

Click on "**Add More**" if you decide to queue more songs. hit the "**Convert**" button if you quit adding more tracks, albums, or playlists.

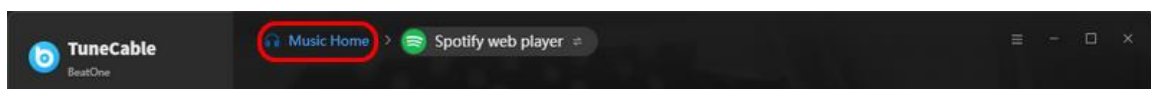

Step 5: Check the Downloaded Music Files

Moving the pointer cursor to any track and clicking the **"folder icon"** will orient you to the saving location. Besides, the download history can be checked under the **"History"** column.

Step 6: Switch to Another Music Platform

If you want to download music from other platforms, click the **"Music Home"** at the top left to return to the start-up interface and start over.

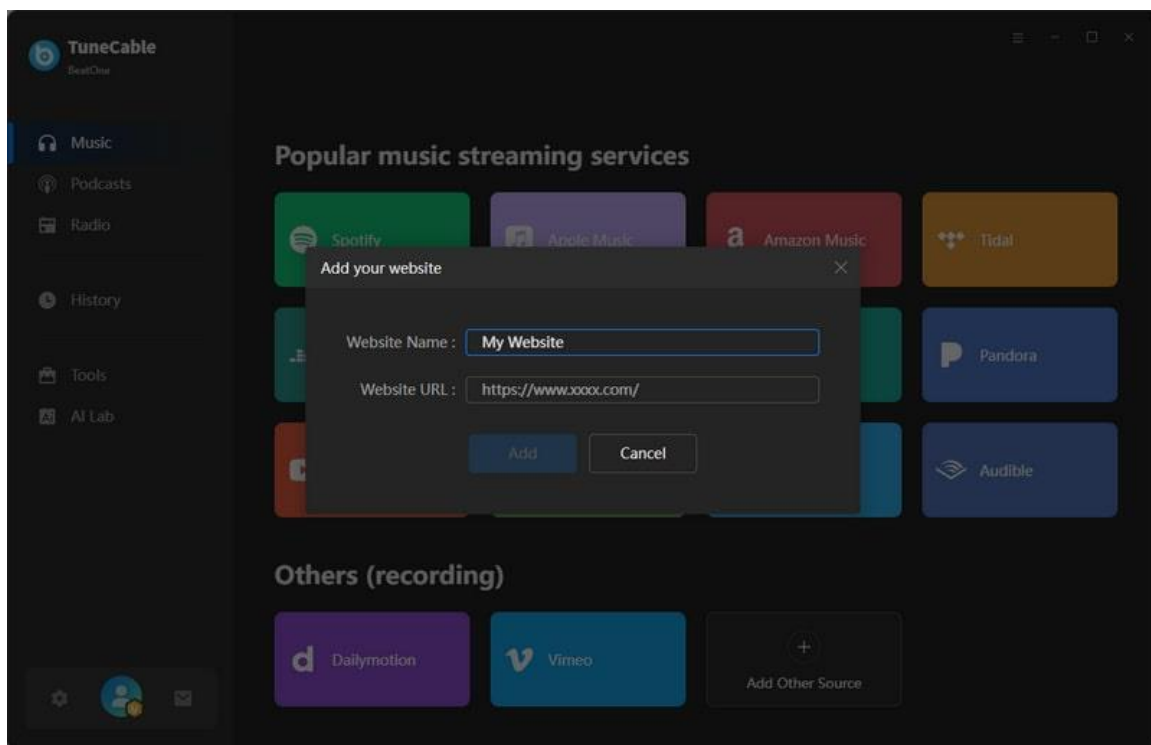

Record Music from the Website

Step 1: Select Music Course or Add Custom Website

Start TuneCable BeatOne after the installation. On the start-up interface, navigate to Dailymotion, Vimeo, or other music sources.

If you could not find the wanted platform, scroll down and click on **"Add Other Source"**. Input a name and URL to generate a custom entry.

Let's take Vimeo as an example. Click **"Vimeo"** to activate the embedded Vimeo website. Find your wanted tracks in the Vimeo website.

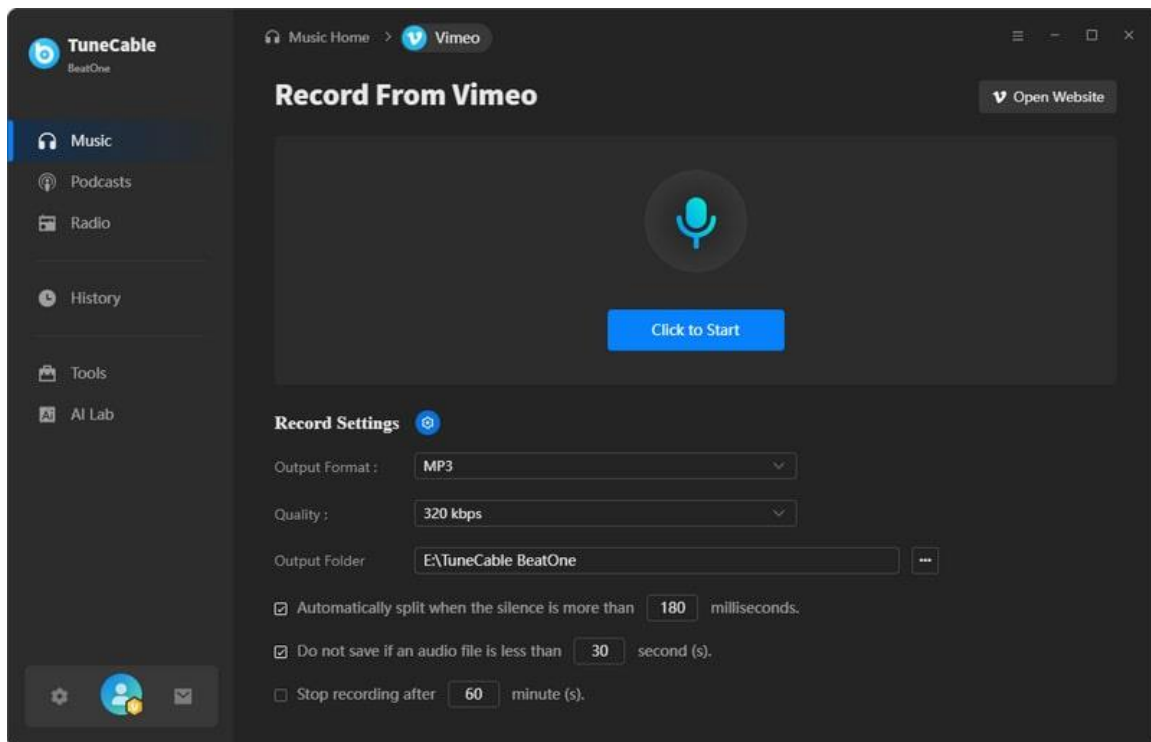

Step 2: Customize the Output Settings

In the **"Music"** page, you are allowed to alter the **"Output Format"** and **"Quality"**. Additionally, according to your specific requirements, you may opt

to enable the software's automatic detection of playing audio, accompanied by selected processing tasks such as automated trimming of lengthy recordings, filtration of excessively brief clips, or programming it to cease recording upon reaching a predetermined duration. Simply mark the checkboxes corresponding to your desired choices.

Record Settings:

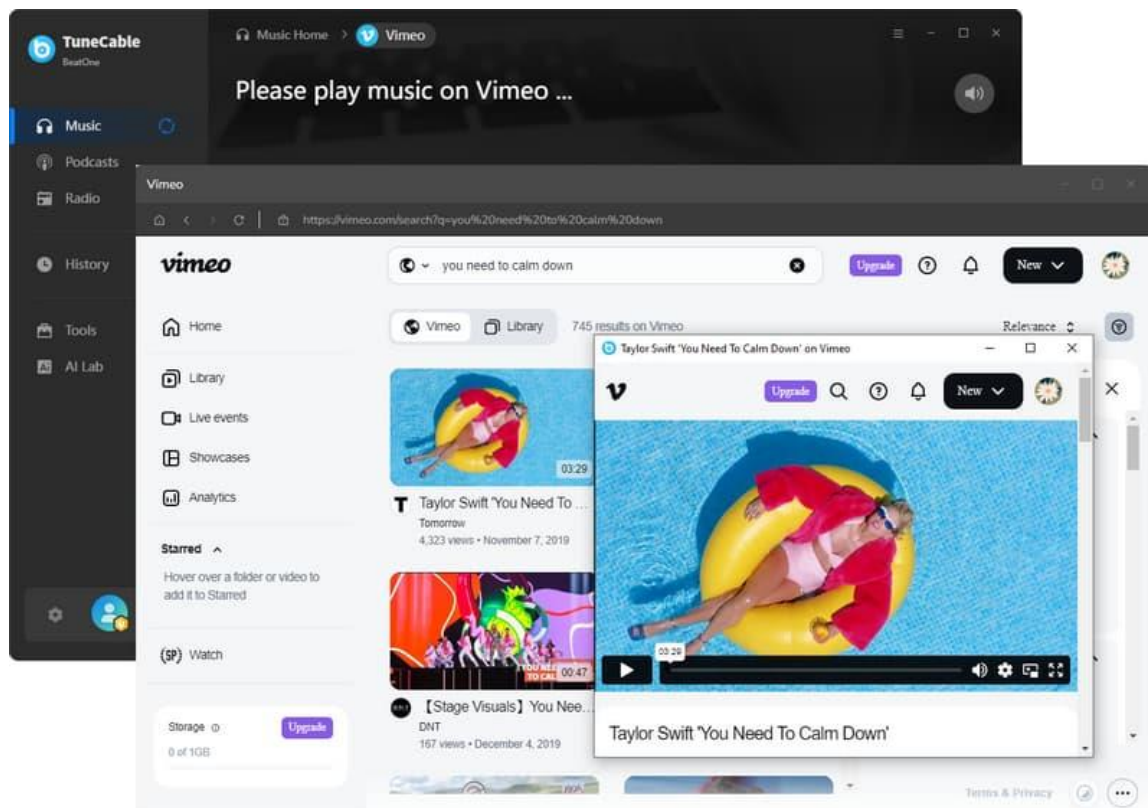

- **Output Format:** MP3, AAC, FLAC, WAV, AIFF, ALAC
- **Quality:** 128kbps, 192kbps, 256kbps, 320kbps
- **Output Folder:** To your preference

Step 3: Start Recording Music

Please log in to your account and open the music you wish to record. Subsequently, initiate the recording by clicking the blue "**Click to Start**" button

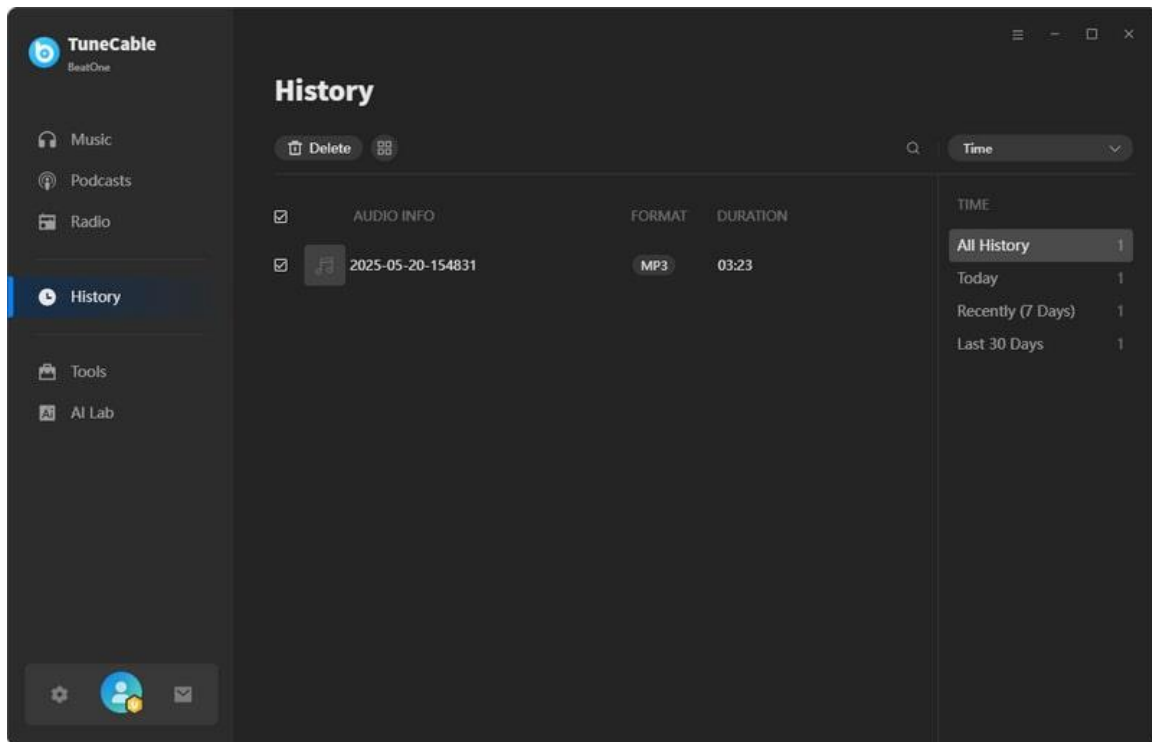

on the main interface. Then play the music to activate recording. TuneCable will automatically start recording upon detecting the music and stop when the song ends, ensuring you don't miss a second. Additionally, it will intelligently separate each track and retain the song's metadata.

Step 4: Check the Downloaded Music Files

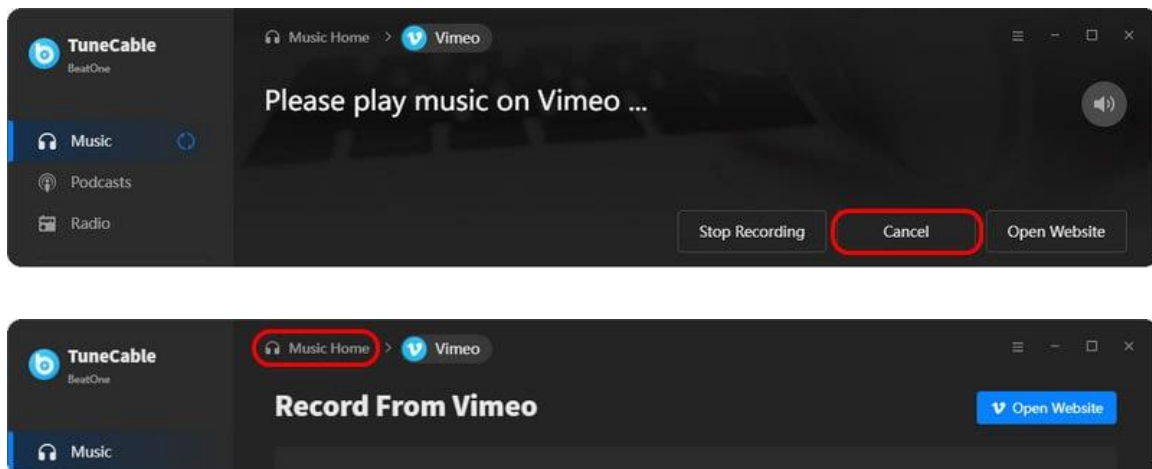

Upon completion of the recording, click **"Stop Recording"**. The recorded song will then be automatically saved to the output path you have designated.

Navigate to the **"History"** column to view your download history. The **"folder icon"** adjacent to each track will guide you to its respective output folder.

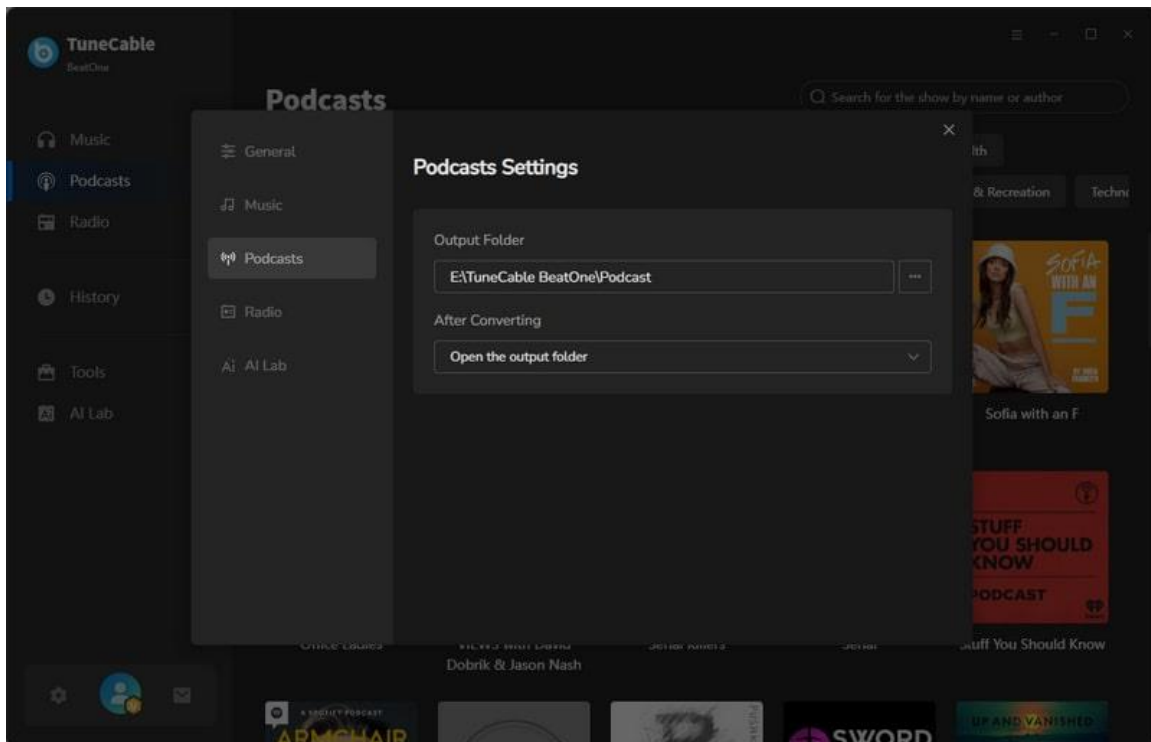

Step 5: Return to the Main Interface

If you want to download music from other platforms, click **"Cancel"** and go to **"Music Home"** in the upper left.

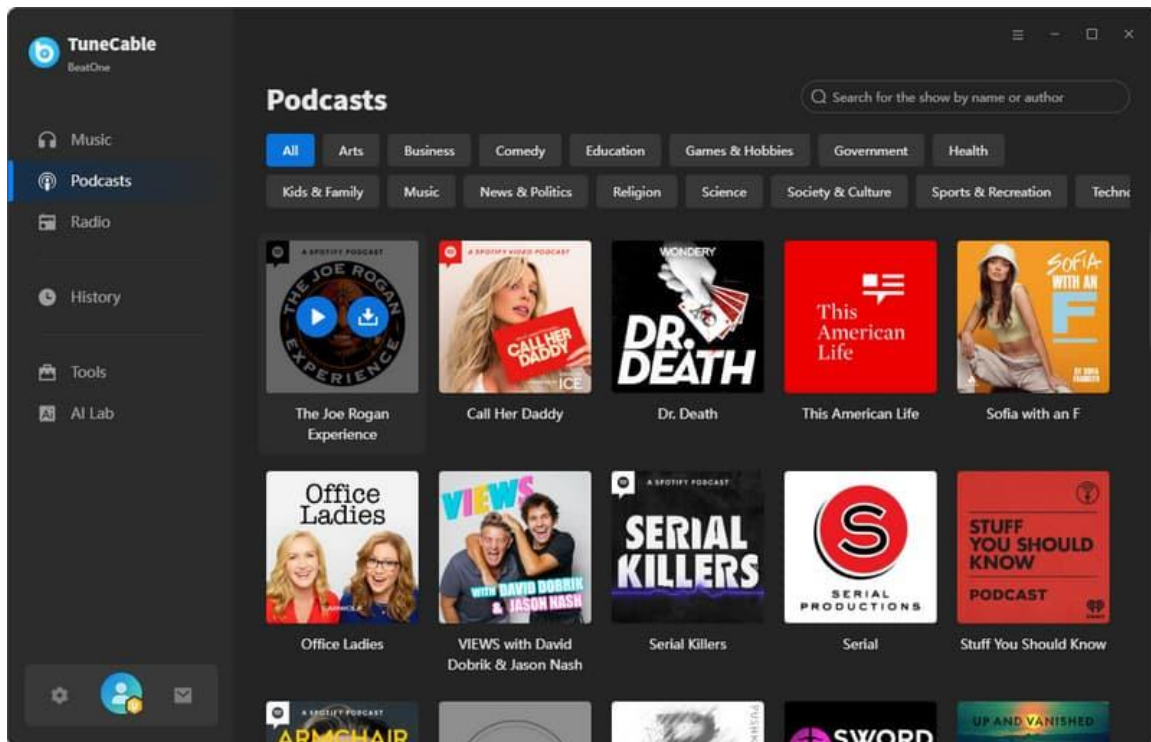

Free Podcasts Channel - How to Download

Step 1: Go to the **"Settings"** section and choose **"Podcasts"** to change the output folder.

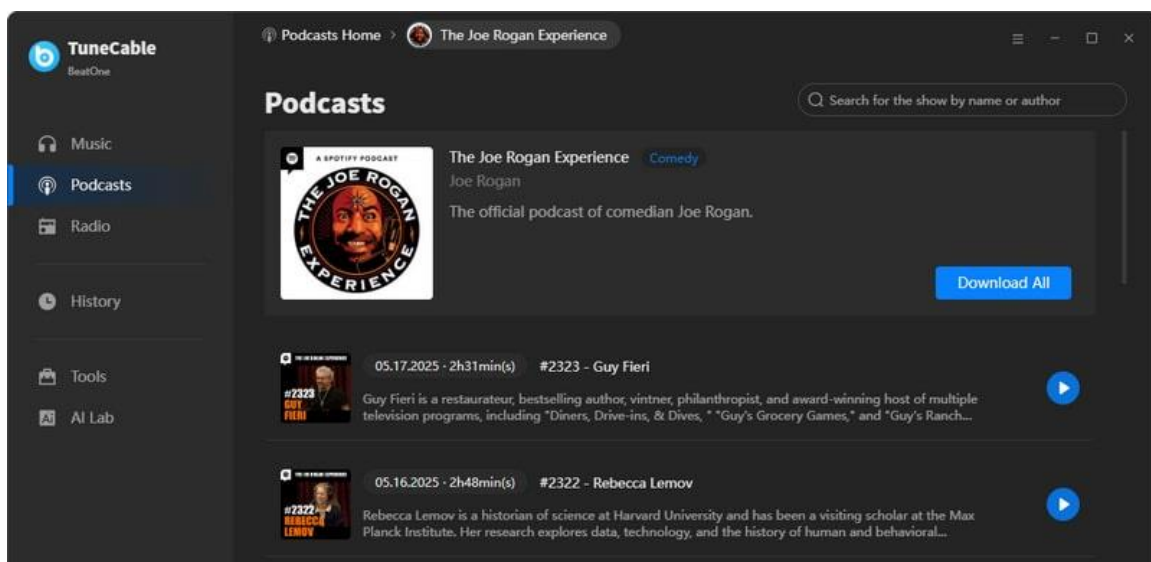

Step 2: Go to the **"Podcasts"** section and choose a podcast via genre filter. To quickly locate a preferred podcast, input keywords in the search box.

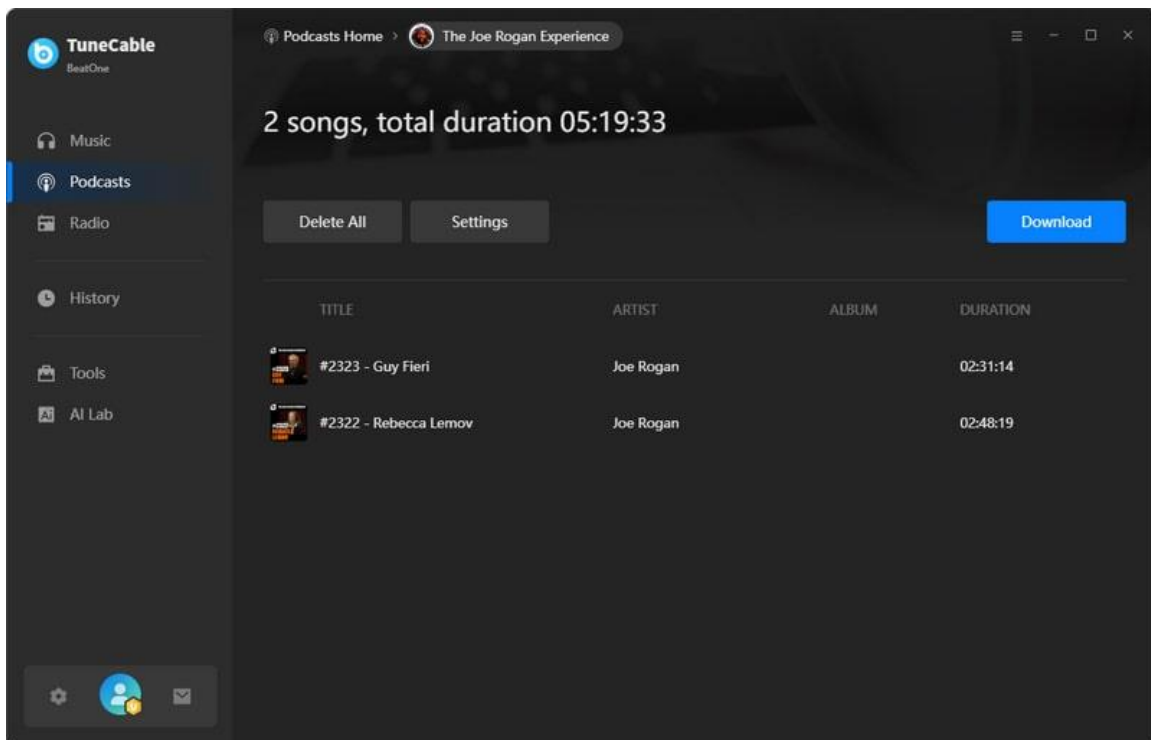

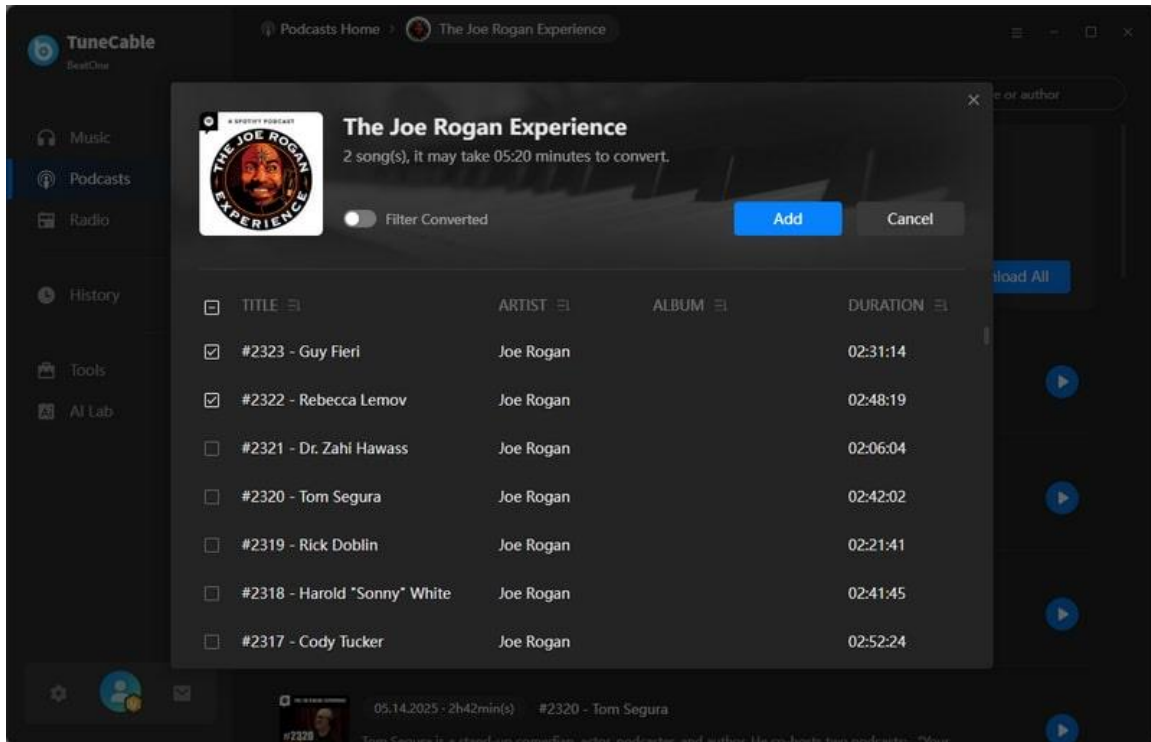

Step 3: Two icons appear upon hovering over the podcast's cover, respectively indicating **"play"** and **"download"**.

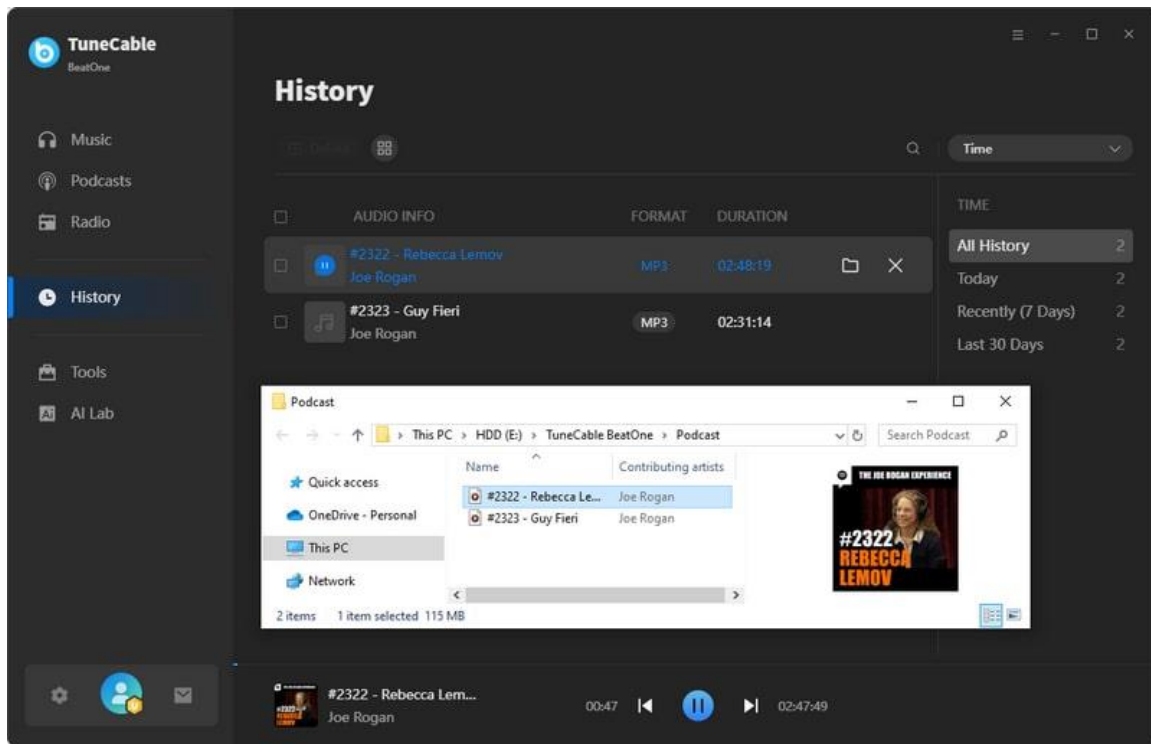

Step 4: Instead, click the empty space on the podcast cover, you'll be directed to a detailed page with multiple download buttons next to each episode, and above all, there's a **"Download All"** button.

Step 5: Click "**Download All**" to generate a full list of all episodes. Choose the needed episodes and click "**Add**". Then, click "**Download**" to start conversion.

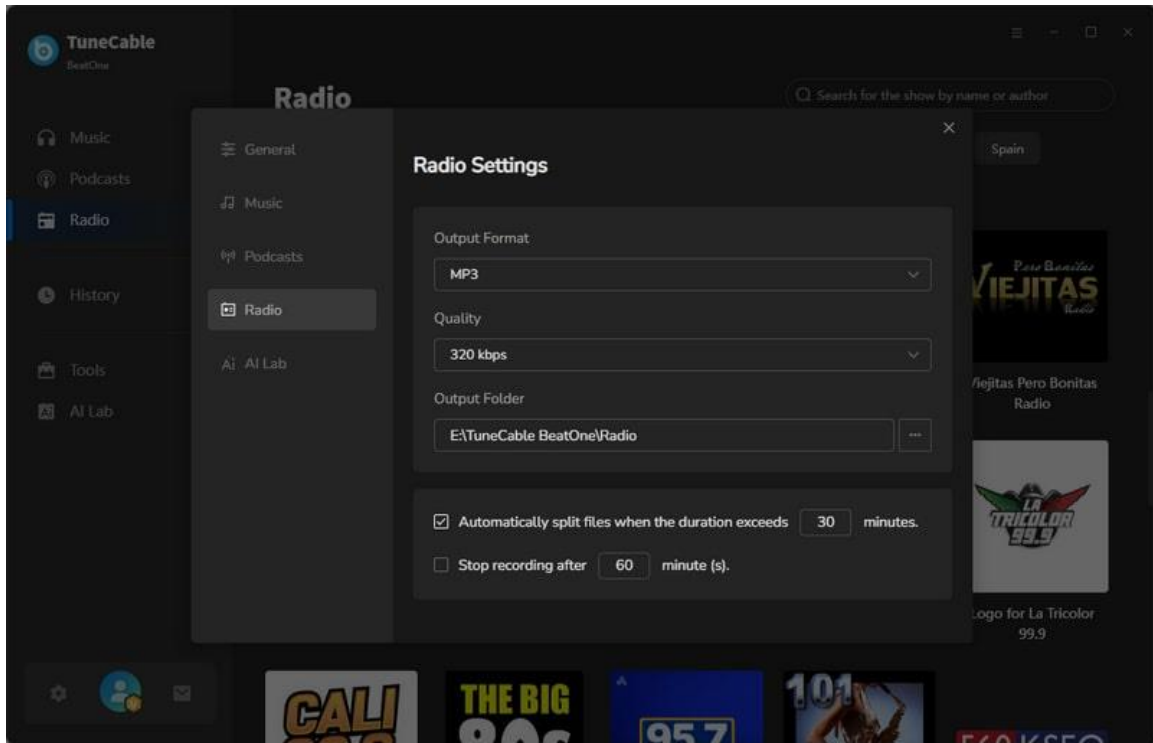

Step 6: Upon completion of the conversion, a folder pops up to give you quick access to the downloaded podcasts. Furthermore, navigate to the **"History"** section where you can view your download history.

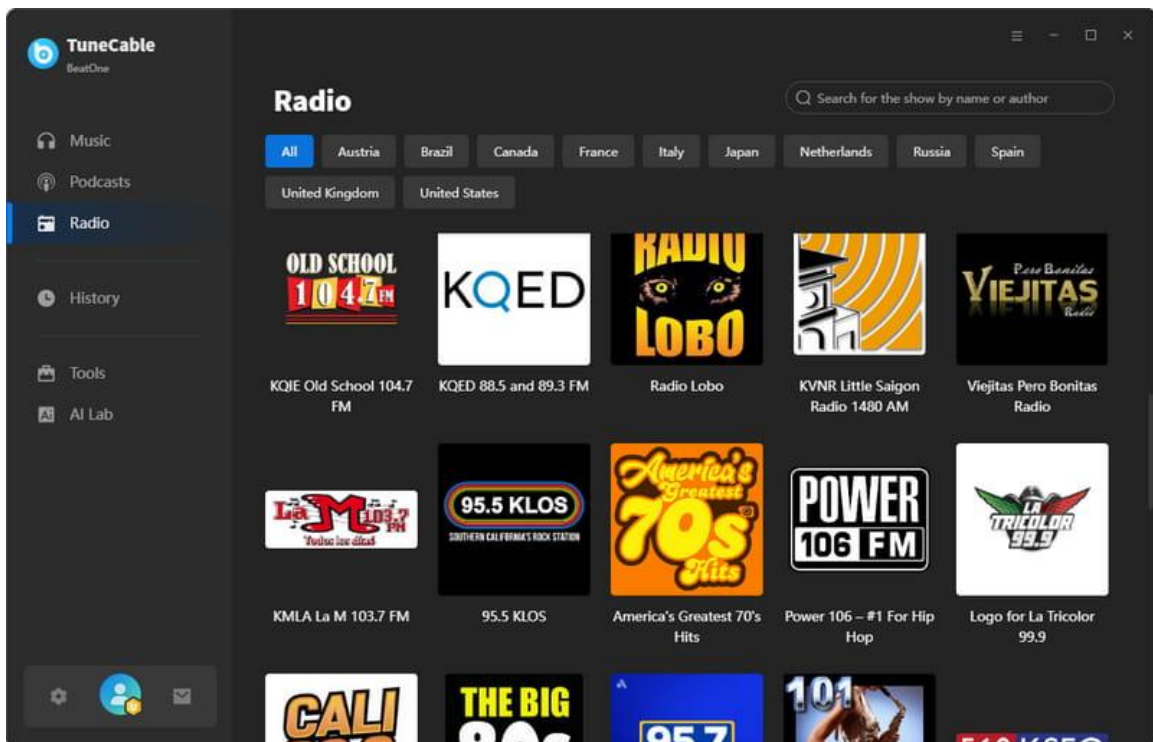

Free Radio Channel - How to Record

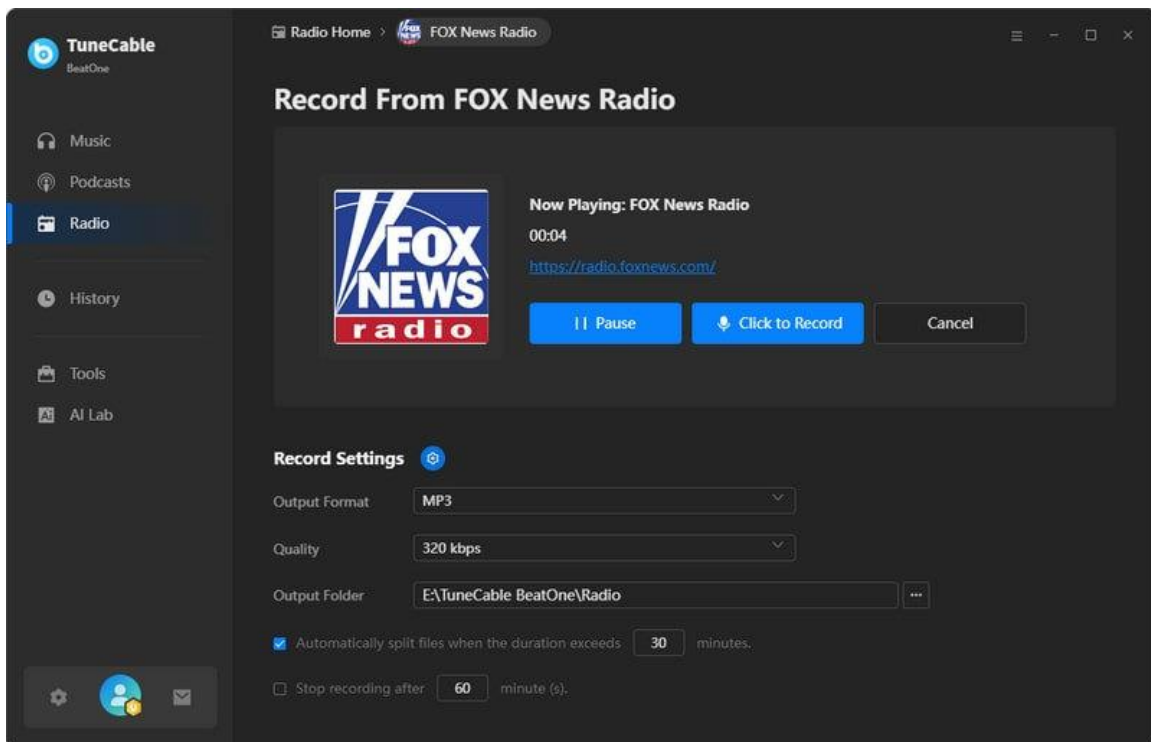

Step 1: Go to the **"Settings"** section and choose **"Radio"** to change the output folder saving path, output format, quality, and other parameters.

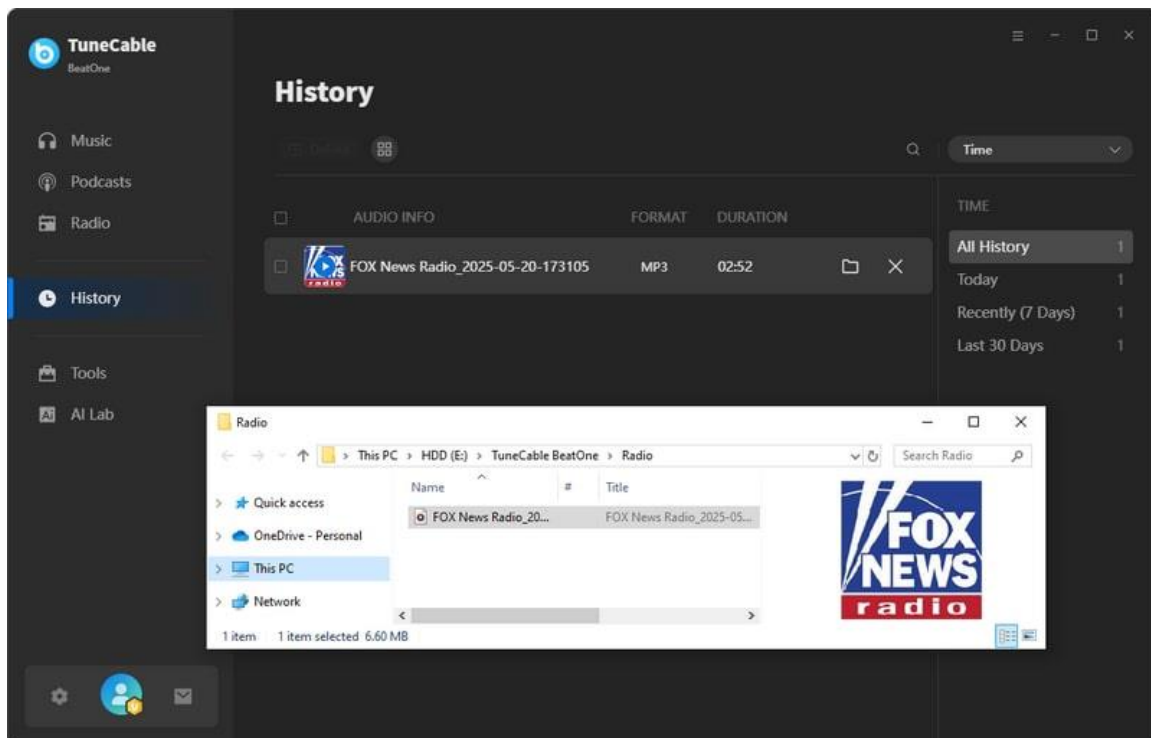

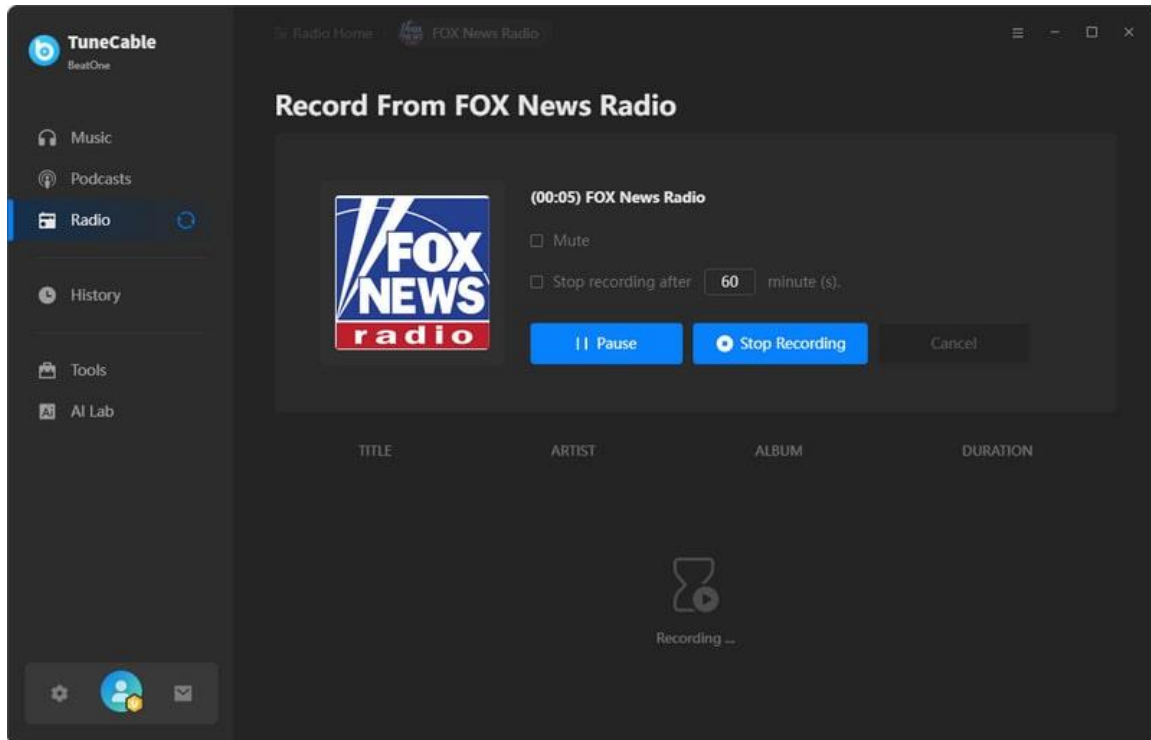

Step 2: Browse for radio shows you want under the "**Radio**" channel. Click the blank space on any radio cover.

Step 3: Play the show, and tap on **"Click to Record"** to activate the task.

Step 4: When finished, stop recording and look for the show on your local disk.

Notes on Custom Output Settings

1. After selecting different output formats, the options for bit rate, bit depth, and sample rate will be different.
2. When choosing "**Record Mode**" as the conversion mode and the "**Auto**" option in output format, TuneCable can intelligently help export music in original quality and format.
3. To download music from an app or web player, use **Record Mode**. If your network connection is unstable, switch to **YouTube Mode** to download the same song from YouTube. **Intelligent Mode** means TuneCable automatically switches between downloading music from xxx app/web player or YouTube.
4. If you choose to download one or more playlists without changing the order of each track, access "**Settings**" in lower left of TuneCable main interface. Under "**Output File Name**", retain only "**Playlist Index**" and "**Title**". Head to "**Output Organized**", select "**Playlist**". Then the converted playlist will be saved in its original order.
